

SURGERY AT HOME IS BETTER THAN IN WAR ZONE

Dr. Edward I. Rich was asked today whether it is true, as commonly supposed, that remarkable advancement in medicine and surgery has been accomplished in the European war. He replied promptly that the belief is erroneous; that far greater progress is being accomplished by the doctors of peaceful America, who have time and opportunity, as well as incentive, to study and experiment in their never-ceasing crusade against the physical and mental ills which afflict mankind.

Asked concerning the much-advertised "new" methods of surgery now used in the war, Dr. Rich said there was nothing new about them, that the serums and antiseptics, X-ray and other things of which the war scribes are writing, long have been used in America.

Dr. Rich spoke in glowing terms, however, of the wondrous work in surgery of Dr. Albee of New York City, who gave a demonstration on bone transplantation before the Utah State Medical association at Holy Cross hospital at Salt Lake City about a year ago.

The patient upon whom Dr. Albee

exercised his incomparable genius was Leonard Taylor of Ogden, about 11 years old, who was paralyzed from his hips down. Dr. Rich, who had a deep interest in the welfare of the boy and took him to the hospital for the operation, evinced keen pleasure in stating that the demonstration was a success, and the lad is now cured, sound and well.

Surgical "miracles" of this kind, said Dr. Rich, cannot be accomplished by the doctors in war service, because they haven't time for the tedious and painstaking work. They must treat large numbers of men, in a hurried and superficial manner. They have made no progress in surgery, he said, except, perhaps, in plastic surgery—the remoulding of the face of a mutilated soldier, for example.
